Antibody to Mouse CD4
RAT MONOCLONAL

Catalog Number: AB-421
Quantity: 500 micrograms, 1 milligram
Format: Lyophilized
Host: Rat
Isotype: IgG
Clone: mCD4
Immunogen: Purified mouse LN CD4+ T cells

Background:

CD4 is a cell-surface glycoprotein found on the mature helper T cells and immature thymocytes, as well as on monocytes and macrophages. (Some cytotoxic T cells have CD4 protein as well.) Normally, about 65% of T cells in the blood are CD4+ (have CD4 protein protruding from their membrane). A mature T cell with either have CD4 or CD8, but not both. During one stage of development T cells develop CD4 and CD8 receptors, but they eventually are differentiated in the thymus and become more specialized.

Specificity and Preparation:

Rat Anti-Mouse CD4 is purified by ion exchange column. Protein concentration is 1 mg/ml in PBS (after reconstitution).

Usage and Storage:

Applications include staining and cytotoxicity. For staining, use 10 μ l/10⁶ cells. Titer for cytotoxicity should be determined by the investigator.

Reconstitute with H₂O. Mix gently, wash the sides of the vial and wait 30-60 seconds before use. In lyophilized form, store at 4°C. After reconstitution, if not intended for use within a month, aliquot and store at -20°C. Antibody is stable two years lyophilized, one month in solution at 4°C.
