**Anti-Conjugated Acetylcholine  
RABBIT POLYCLONAL**

**Catalog Number:** AB-T02  
**Quantity:** 50 microliters  
**Format:** Lyophilized and reconstituted with deionized water / 50% glycerol.  
**Host:** Rabbit  
**Isotype:** IgG  
**Immunogen:** synthetic choline-glutaric acid conjugated to bovine serum albumin

**Specificity and Preparation:**

Antiserum previously preabsorbed on protein carriers and purified by ammonium sulfate precipitation.

This antibody targets conjugated choline-glutaric acid. Staining with glutaraldehyde fixative creates conjugated acetylcholine in tissue.

Using a conjugate Choline-glutaric acid-BSA antibody specificity was performed with an ELISA test by competition experiments with the following compounds:

COMPOUND	CROSS REACTIVITY §
Choline-GA-BSA	1
Choline-allyl alcohol-G-BSA	1/1.6
Phosphatidylcholine	1/>10,000
Choline	1/>10,000
Acetylcholine	1/>10,000

GA = Glutaric anhydride, BSA = Bovine Serum Albumin

§ Choline-GA-BSA concentration/unconjugated or conjugated analogs concentration at half displacement

**Usage and Storage:**

Applications include ELISA (1/2,000-1/5,000) and immunohistochemistry / immunocytochemistry (1/500 -1/1,000, paraffin). Store the antibody at 4°C for one month or -20°C in undiluted aliquots for up to one year. Avoid repeated freezing and thawing. Gently spin down material before use; 5-10 seconds in a microfuge should be adequate.

**Available Control(s):** Corresponding antigen.
