

Anti-Conjugated 6-Hydroxydopamine RABBIT POLYCLONAL

Catalog Number:	AB-T104
Quantity:	50 microliters
Format:	Lyophilized and reconstituted with deionized water / 50% glycerol
Host:	Rabbit
Isotype:	IgG
Immunogen:	Synthetic 6-Hydroxydopamine conjugated to BSA

Specificity and Preparation:

Antiserum previously preabsorbed on protein carriers and purified by ammonium sulfate precipitation.

This antibody targets conjugated 6-Hydroxydopamine. This antibody does not recognize free 6-Hydroxydopamine.

Using a conjugate 6-Hydroxydopamine-BSA, antibody specificity was performed with an ELISA test by competition experiments with the following compounds:

COMPOUND 6-Hydroxydopamine-G-BSA Dopamine-G-BSA L-DOPA-G-BSA CROSS REACTIVITY [§] 1 1/>50,000

1/>50,000

G = Glutaraldehyde, BSA = Bovine Serum Albumin

§ 6-Hydroxydopamine-G-BSA concentration/other conjugated catecholamine concentration at half displacement.

Usage and Storage:

Applications include ELISA (1/1,000-1/5,000), immunoblotting (western blot 1/1,000-1/2,000). Fixation of tissue for use with these antibodies should be done with glutaraldehyde. The use of paraformaldehyde in conjunction with glutaraldehyde may improve staining results. Store the antibody at 4°C for one month or -20° C in undiluted aliquots for up to one year. Avoid repeated freezing and thawing. Gently spin down material before use; 5-10 seconds in a microfuge should be adequate.

Available Control(s): 6-Hydroxydopamine-G-BSA
