

## Targeting Technology

Advanced Targeting Systems' technology - Molecular Neurosurgery - is a modification of one of the most widely used techniques in the neurosciences: lesioning of a region by surgical means and observation of the effect.

Choose an ANTIBODY<sup>§</sup> specific to your cell type.

SAPORIN is a potent cytotoxin. Safe in the lab. Lethal in the cell.

ATS binds SAPORIN with your ANTIBODY to make a powerful targeting agent.

<sup>§</sup>or growth factor, peptide, ligand, or cytokine

The targeting agent is administered to the cells (*in vivo* or *in vitro*).

The antibody seeks out its target receptor on the cell surface.

Cells that do not have the receptor will not be affected.

The conjugate is internalized and SAPORIN breaks away from the antibody.

SAPORIN inactivates the ribosomes.

The result is **CELL DEATH.**

## Targeting Teaser

Unscramble these five Jumbles, one letter to each block, to form the name of this noted scientist.

CHEAPONNILED

NEWRIN

CHICSYP

HOTPALMOGHOLY

IRONPIRATES

Is it really a matter of Mind over manners?

Arrange the circled letters to form the name of this noted scientist, as suggested by the above clue.

Answer:

Limit one entry per laboratory.

WIN  
\$100.00

1. Solve the puzzle.
2. Fax in this entire page with the correct solution by November 30, 2004.
3. Win \$100 credit toward your next purchase.

See last quarter's winners, page 5.
