

## Antibody to Nerve Growth Factor (p75) Receptor, Affinity-Purified RABBIT POLYCLONAL

**Catalog Number:** AB-N01AP  
**Quantity:** 50 micrograms  
**Format:** PBS (0.14 M Sodium Chloride; 0.003 M Potassium Chloride; 0.002 M Potassium Phosphate; 0.01 M Sodium Phosphate; pH 7.4), no preservative.  
**Host:** Rabbit  
**Immunogen:** extracellular fragment from the mouse p75 receptor (amino acids 43-161)

**Background:** The p75 neurotrophin receptor (p75<sup>NTR</sup>), also known as the low affinity nerve growth factor receptor, binds nerve growth factor, brain-derived neurotrophic factor, neurotrophin-3 and neurotrophin-4 with varying specificities. The p75<sup>NTR</sup> plays an important role in neurotrophic factor signaling and has been shown to modulate the susceptibility of selective cellular populations to programmed cell death.

**Specificity & Preparation:** This antibody recognizes p75<sup>NTR</sup> in mouse. The antisera was developed in rabbit using an extracellular fragment from the mouse p75 receptor (amino acids 43-161). The antibody was affinity-purified using the extracellular domain of p75. The antibody is routinely tested by flow cytometry.

**Usage:** Applications include immunohistochemistry (paraffin sections; 1:100)<sup>1</sup> and flow cytometry (ATS in-house; 1:1,000),<sup>2</sup> targeting (targeting agent in mu p75-SAP, Cat. #IT-16).

**Storage:** Store the antibody at -20°C for one year. Avoid repeated freezing and thawing. Gently spin down material 5-10 seconds in a microfuge before use.

Immunofluorescent staining of NG6 cells\* with anti-mu p75. Cells were fixed with paraformaldehyde and blocked prior to staining. Primary was added at 10 µg/ml followed by goat anti-rabbit-FITC (A) and goat anti-rabbit-Cy3 (B) secondary at 15 µg/ml (5 µg/ml for DAPI nuclear staining).

Images were obtained using a 40x (A) and 60X (B) objective and a fluorescent microscope. NGFr staining is represented in green (A) and red (B) and nuclear staining is represented in blue.
