

**Antibody to Nerve Growth Factor (p75) Receptor (192-IgG)  
MOUSE MONOCLONAL**

**Catalog Number:** AB-N43  
**Quantity:** 50 micrograms  
**Format:** 50% PBS/50% Glycerol  
**Host:** Mouse  
**Isotype:** IgG1  
**Clone:** 192  
**Immunogen:** extracellular domain of rat p75

**Background:**

The low affinity nerve growth factor receptor (p75) is a 75kDa membrane-spanning glycoprotein lacking intrinsic tyrosine kinase activity. p75 is expressed in various parts of the brain, notably in the basal forebrain by cholinergic neurons. Loss of these neurons is one of the hallmarks of Alzheimer's disease.

**Specificity and Preparation:**

This antibody recognizes the rat p75 low-affinity nerve growth factor receptor. The immunogen is isolated n-octoglucoside stabilized proteins containing p75 receptor from PC-12 cells. The antibody was produced in ascites fluid and purified by 50% (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> precipitation followed by protein A column chromatography.

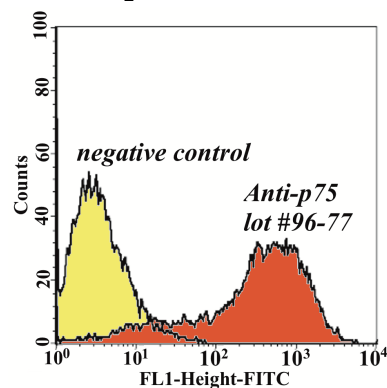

**Usage and Storage:**

Applications include flow cytometry (1 µg per 2x10<sup>6</sup> cells; ATS in-house), immunohistochemistry (1:500),<sup>1</sup> targeting (targeting agent in 192-IgG-SAP, Cat. #IT-01). Working dilutions must be determined by end user. Do not freeze this antibody. Store at 2-8°C for one year. Gently spin down material before use; 5-10 seconds in a microfuge should be adequate.

7H6 cells (a clone of C6 rat glioma cells) were used in flow cytometry with antibody to NGFr (192-IgG, p75, Cat. #AB-N43). Cells were treated with 1 µg of anti-p75 in the presence of 0.05% sodium azide, and subsequently with anti-murine IgG-FITC (Cat. #FL-07).
